

SOVA
CRYPTO AI WORKFORCE

Command your AI workforce.

The employer terminal for the on-chain agent economy — deploy, direct and ultimately own a team of professional AI employees.

● Closed beta · Whitelist open

\$SOVA · sova.zone · @zeanzhilife

THE PROBLEM

Crypto never sleeps. **You do.**

1

24/7 markets, infinite feeds

Alpha decays while you sleep. No human watches every chain, every narrative, every wallet in real time.

2

On-chain truth is buried

The signal lives in wallet flows, contract changes and token unlocks — data no person can parse fast enough.

3

Institutions have desks. You don't.

Funds run research, risk and diligence teams. Retail runs on screenshots, group chats and luck.

THE SOLUTION

Hire a squad of **AI employees**.

Deploy

Direct

Own

Deploy specialized AI employees, direct them from one command center, and — as the network matures — own them: publish, compose and trade employees whose output settles on-chain.

Every decision and every asset always stays with you.

One console, **seven employees.**

Live mesh

Every employee, task and signal on one surface, updating in real time.

Coordination

Employees hand off, escalate and collaborate — you watch the whole flow.

You in the loop

Only the moments that genuinely need judgment reach your desk.

7

employees

24/7

coverage

99.98%

coordination

Seven crypto specialists, on call 24/7.

narrative heat vs 7-day avg

36

smart wallets tracked live

Illustrative product output — sample data shown for the interface, not a performance claim.

One platform, **five layers.**

01

Digital Workforce Engine

A deployable, customizable system of specialized AI employees.

02

Command Center

One console to orchestrate intel, tasks, execution and performance.

03

Authorized Execution

Controlled actions within per-action, interruptible, auditable limits.

04

Trust & Sovereignty

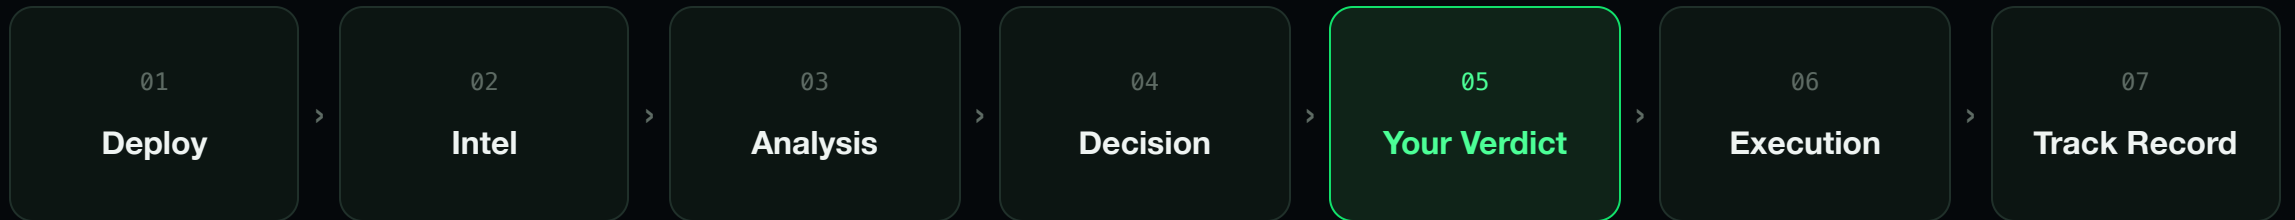

Non-custodial — decision rights and asset ownership remain yours.

05

Marketplace & Ownership

Employees published, composed and traded; output settled on-chain.

From deploy to **track record**.

Every pipeline routes the final call — and the assets — back through you before anything executes.

You stay on the **throne.**

Non-custodial

Sova never holds your private keys or assets.

Per-action authorization

Nothing runs until you approve that specific action.

Interruptible & auditable

Stop anything mid-flight; every step leaves a trace.

No blind delegation

Employees advise and prepare — you decide and sign.

The on-chain agent economy **is here.**

\$1–5B

Valuations reached by leading crypto AI-agent projects (2024–25, approx.)

\$40B+

Projected AI-agent software market by 2030 (analyst estimates)

24/7

Non-custodial and always-on — crypto is the native home for autonomous agents

Autonomous AI has found its native rails in crypto: non-custodial, 24/7, composable. **"AI agents"** became one of the largest crypto narratives of 2024–25 — yet the tools that **employ and command** those agents are still unbuilt.

Market and third-party figures are approximate estimates shown for context; verify before use.

Where the category trades.

Bittensor · TAO

Decentralized machine intelligence

≈ \$3–5B

Virtuals Protocol

AI-agent platform & launchpad

≈ \$2–5B

ai16z · ElizaOS

AI-agent framework & DAO

≈ \$1–2.5B

Fetch.ai · ASI

Autonomous AI agents

≈ \$1–3B

Autonolas · OLAS

Autonomous agent services

≈ \$0.2–0.5B

Agent networks in this category have repeatedly reached **\$1B+**. Sova sits here as the user-owned **employer terminal** — not another framework.

Approximate peak market caps, 2024–2025 — category context only. Verify current figures. Not a valuation of Sova.

TOKEN

\$SOVA

Access

Gate and provision your employee workforce.

Marketplace

Publish, compose and trade employees and their output.

Settlement

Employee output and performance settle on-chain.

Planned utility, subject to change. Nothing here is an offer, a promise of returns, or investment advice.

Where we **are.**

Stage	Access	Backers	Metrics
Closed beta	Whitelist open	Undisclosed	Undisclosed

NOW	● Closed beta	7 crypto employees, command center, per-action control.
NEXT	● Open whitelist	Scale the workforce, message-channel control, scheduled tasks.
THEN	● Marketplace	Publish, compose and trade employees; on-chain settlement.
ENDGAME	● Owned workforce	An AI labor market owned by its employers, not rented.

The endgame: an AI labor market **you own.**

Everyone an employer

Every user runs their own AI workforce — not just institutions.

A real marketplace

Employees are published, composed and traded — a liquid labor market.

On-chain settlement

Output, performance and reputation settle on-chain and stay portable.

Owned, not rented

Value accrues to the people who deploy and own employees.

Your squad → a shared workforce → an economy owned by its employers.

What Sova will **never** do.

Non-custodial

Never holds, moves or has access to your funds or keys.

No trade execution

Never places trades or transfers on your behalf.

No personalized advice

Research and options, not licensed investment advice.

Always authorized & auditable

Every action needs your sign-off and leaves a trail.

From institution-grade intelligence
to an **AI workforce owned by everyone.**
